A1: World Archaeology

Archaeology is the study of the human past. Archaeologists investigate the origins of our species, document the diversity of ancient cultures (e.g., social institutions, political dynamics, and economic interactions), and seek to explain the emergence of the first cities and empires. Archaeologists study material remains (from stone tools to monuments) and settlements (from villages to cities) to answer questions such as: How did tool use affect evolution of the modern human brain? What can the earliest art tell us about interaction and cognition of early humans? How did daily life change with domestication of plants and animals? What are the sources of social inequality? When - and why - did leadership emerge? How did early empires encompass such vast territories, and why were their rulers so powerful? What was everyday life like for medieval peasants? Archaeologists employ diverse approaches, drawn from the arts and social sciences, as well as using scientific analyses. The place of archaeological heritage in today’s world is also a matter of on-going debate.

Paper Co-ordinator: Elizabeth DeMarrais (ed226@cam.ac.uk)

Lecturers: Cyprian Broodbank, Elizabeth DeMarrais, Jason Hawkes, John Robb, Marie-Louise Stig Sørensen, Hratch Papazian, Augusta McMahon

Practicals: Sheila Kohring, Eleanor Wilkinson

Structure: Lectures: 2 x 1 hour each week (Tues & Weds, 12 noon, Michaelmas, Lent & Easter terms)

Practicals: 4 practicals (2 in Michaelmas & 2 in Lent)

Field trips: Stonehenge trip (currently planned for March, details tbc)

Supervisions: 8-9 supervisions are suggested (3 in Michaelmas, 3 in Lent, & 2-3 in Easter)

Mode of examination: See the Form and Conduct Notice for 2017-18
https://www.vle.cam.ac.uk/course/view.php?id=142641&sectionid=1949061
**A1: World Archaeology** is a broad undergraduate lecture series that introduces Part I students to key concepts and practical approaches in archaeology, highlighting their applications in interpreting the human past. Emphasis will be placed on the questions that archaeologists investigate and the ways they go about addressing and answering those questions. Students will learn about the recovery, recording, and interpretation of archaeological data (artefacts, buildings, landscapes) that relate to the broad span of human history and prehistory. The links between theory and archaeological methods will be illustrated with case studies and examples drawn from a wide range of time periods and geographic regions.

**Learning outcomes:**
On the successful completion of **A1: World Archaeology** students will be able produce high quality written work that demonstrates an informed and critical understanding of a range of key archaeological theories, methods, and themes in the study of the past.

**Course structure:**
**A1: World Archaeology** is taught through a combination of lectures and practical classes. There are 33 lectures for **A1: World Archaeology**. Lectures are presented at 12 noon on Tuesdays and Wednesdays in various Mill Lane Lecture Rooms (see timetable below). **Make sure you check the timetable carefully so that you go to the correct room for the lecture.** A course overview session will take place in Easter Term (see timetable below).

Four hands-on practical sessions, using artefacts from the Museum of Archaeology & Anthropology, are held in the Keyser Room in the Museum. Practical sessions are a required part of the course, in most cases replacing Weds lectures during the weeks in which they are held. Practicals expand and illustrate the material presented in lectures. Students will be assigned to a session at the beginning of the Michaelmas. **Please attend the practical at your assigned hour;** if you have a conflict, please swap with another student to ensure that we keep the numbers balanced so everyone has an opportunity to participate.

Michaelmas Term

Lecture 1. 10 October 2017
Introduction to Paper A1: What is archaeology? (EDM)
This lecture introduces the paper, providing an overview of key themes, theories, and the nature of archaeological research. Archaeologists seek to understand the past, examining material remains to explain how we came to live as we do in the present. Drawing upon the arts, social sciences, and sciences, archaeologists investigate past social organization, ancient economies, politics, art and symbols, diet, health and nutrition, as well as human ecology and past environments.

Reading (full references at the end of the lecture list)
Renfrew and Bahn 2012, Introduction and Chapter 1
Scarre (ed.) 2009, Chapter 1
The Oxford Handbook of Archaeology, Editors: Barry W. Cunliffe, Chris Gosden, Rosemary A. Joyce
Oxford University Press, 2009
NB: There is an extensive set of e-books that can be found under a search for "Oxford Handbooks in Archaeology Series". These are up-to-date reference books that cover regions (‘Meso-America’ or ‘European Archaeology’ as well as specific topics such as ‘Hunter-Gatherers’. )

Lecture 2. 11 October 2017
What happened in the past? (CB)
Archaeology addresses the lion’s share of global long-term history, and therefore most of the fundamental reasons why human and other contemporary life on the planet has developed as it has, and looks as it does today. This lecture argues for archaeology’s unrivalled scope in this respect, and also introduces some of the key attributes of the planet on which human history unfolded. This lecture also provides an overview of World Prehistory to orient students. The archaeological sequences in Old and New Worlds are outlined, highlighting key thresholds and transformations, to help students acquire an appreciation of the ‘big picture.’ Early hominins, the origins of art and culture, the domestication of plants and animals, the rise of complex societies and regional polities, and ultimately the appearance of cities and empires are covered. Subsequent lectures will refer back to this framework, providing a detailed look at case studies around the core themes.

Readings (find the full references at the end of this document)
Scarre (ed.) 2009, Chapters 1-5
Scarre (ed.) 2009, Chapter 5 (+ any or all of Chapters 6-18 – i.e. reading for the whole course!)
Morris, 2010.
Renfrew, 1990.
Schnapp, 1993.
Sherratt, 1996.
Shryock, and Smail, 2011.
Trigger, B. 2006. Chapter 1, Chapters 2-5 as time allows.

Lecture 3. 17 October 2017
Origins - from apes to humans. Professor Marta Lahr
Lecture 4. 18 October 2017 Professor Marta Lahr  
Origins - from Africa to the world.  

Practical 1: 18, 19, 20 October 2017 (SEK/EW)

Lecture 5. 24 October 2017  
The Neanderthals - what is their place in human evolution? (PTM)  
This lecture concentrates on our closest extinct relatives, the Neanderthals. What is their origin? What technology did they use? What did they eat? Did they hunt? And finally: Why did they die out? Did they mix with modern humans?  
Reading(find the full references at the end of this document)  
Gamble 1999, Chapter 5  
Klein 2009, Chapter 6  
Mellars 1996  
Scarre (ed.) 2009, Chapter 3

Lecture 6. 25 October 2017  
Modern Humans in and after the Ice [PTM]  
In this lecture we will consider our own species’ origins and dispersal in nearly all parts of the planet. What makes modern humans in Africa different to contemporary Neanderthals in Europe? Where and when do we see the first evidence of symbolic behaviour and “art”? This also includes an overview of the art-rich Upper Palaeolithic in Europe.  
Reading(find the full references at the end of this document)  
Gamble 1999, Chapter 7  
Klein 2009, Chapters 6-7  
Scarre (ed.) 2009, Chapter 4

Lecture 7. 31 October 2017  
How NOT to think about early farming (JER)  
Agriculture supports almost all human populations worldwide, yet humans have been farmers only for the most recent few millennia or so. How did we become farmers? This lecture (the first of three on the subject) presents the conceptual framework of the problem. To understand the origin of farming and herding, we need to get rid of some centuries-old myths about how humans live and relate to nature, and we need to understand the basics of how foragers and early farmers lived.
Reading (find the full references at the end of this document)
Scarre (ed.) 2009, Chapters 5-11

Current Anthropology, Volume 52, Supplementary Issue 4 (October 2011) has a special-issue region-by-region review of recent research on the origins of agriculture with short articles by noted specialists. It includes up to date summaries on the various regions discussed in the following lecture.

Current Anthropology, Volume 50, Issue 5 (October 2009) has a special section on the origins of agriculture which shows the kind of concepts scholars are using to understand this transition (many of them opposed to each other).

You should browse through both of these. Note that Current Anthropology is available online through the University Library’s e-journals site.

Lecture 8: 1 November 2017
Producing food, producing domesticates, producing society (JER)

This lecture continues the previous one by looking at case studies of how people first began using domesticated plants and animals around the world, with a range of capsule case studies (the Near East, Mesoamerica, temperate North America, the tropical world and some cases in which domestication and/or farming did not happen). It emphasises the socio-ecological and contingent nature of how humans earn a living.

Reading (find the full references at the end of this document)
Scarre (ed.) 2009, Chapters 5-11
Barker 2008
Zeder 2009

In addition, the readings for 11 November remain relevant for this lecture.

Lecture 9: 7 November 2017
The worldwide spread of farming: co-evolutionary stories (JER)

The final of three lectures on early farming, this lecture traces how farming spread out from its original centres of origin to absorb almost all foraging populations and become the economic mainstay of humanity. The spread of farming from the Near East throughout prehistoric Europe in the Neolithic provides the main case study, with some comparative commentary from other regions. We close with a few ethical reflections about resilience, specialisation, productivity and sustainability.

Reading (find the full references at the end of this document)
Scarre (ed.) 2009, Chapters 5-11
Price (ed.) 2000
Robb (2013)

Lecture 10: 8 November 2017
Comparative village farming: SW Asia and the SW United States [EDM/CB]

At variance with the conventional models from western (and eastern) Asia, the early to mid Holocene witnessed entirely different trajectories elsewhere on the planet. Extensive areas remained hunter-gatherer zones, including the entire Australian continent, and elsewhere changes moved to different tempos and involved quite different suites of practices, domesticates and relations to settled or mobile lifestyles — a reflection in large part of
different opportunities and pre-existing conditions. This lecture explores developments first in Africa, where pastoral, cattle-based society seemingly preceded plant cultivation by several millennia, and did much to shape early societies in a greener Sahara and along the Nile. Then it moves onto the Americas, where a patchwork of diverse initiatives sprang up, based on radically different plants and animals, and including Neotropical and montane contexts quite different from Eurasia.

**Reading:**

**Further reading**

Practical 2: 8, 9, 10 November: Cognition and Technology (SEK/EW)

Lecture 11: 14 November 2017
Other pathways into the Holocene: Africa and America (EDM)
This lecture traces the archaeology of early settled life in Africa and the Americas:
What are the consequences of settled village life? Setting down in villages generated problems (social stress, the need to defend private property, disease) and created opportunities (craft specialisation, cooperative labour projects, and leadership). This lecture examines these opportunities and challenges using case studies from the American Southwest and SW Asia, with an emphasis on the emergence of social inequality and leadership.

Bandy & Fox 2010, Chapters 1& 9
Price & Feinman, eds., 1995

Lecture 12. 15 November 2017
Monumental histories (JER)
Following the beginning of farming, early farming societies around the world often engaged in extravagant ritual practices. Why? This lecture discusses ritualism in early farming societies, particularly those of Neolithic Europe. We consider megaliths such as those of Malta, Brittany, and Wessex in terms of their ability to create places for performance, participation in collective social orders, cosmology, and the role of ritual knowledge in politics.

Reading (find the full references at the end of this document)
Scarre (ed.) 2009, Chapters 5-11
Bradley 1991
Parker Pearson et al. 1998
Thomas 2000

Lecture 13. 21 November 2017
Beyond villages: Making more of agriculture (CB)
Beyond the primary domestication of limited sets of plants and animals early in Eurasia’s various Neolithics, a wider range of plants and animals, and of animal and plant ‘secondary’ products’, were added over the ensuing millennia, with dramatic impacts on Eurasian social structures and sumptuary cultures. A few of these, notably using animals’ milk as well as meat, for dairy products, are probably almost as old as farming, but other key developments such as animal traction, portage and wool production, as well as investment in vines and tree-crops (for example, for wine, oil and sugar-rich foods) ensued later. Taken as a group, these developments are woven into explanations for the exceptional trajectories witnessed in later prehistoric Eurasia.

Halstead and Isaakidou 2011.
Sherratt, 1995b.

Lecture 14. 22 November 2017
How did innovations in transport and metallurgy affect early village societies in Europe? (CB)
Between the spread of farming and emergence of early states lies a series of further developments, to varying degrees initially concentrated in, if far from unique to, parts of Eurasia. This lecture looks at two of these in particular, from a comparative perspective. Metallurgy triggered fundamental economic, social and cultural changes, which in part explains why use of particular metals had a prominent place in chronological schemes for later prehistory (Copper, Bronze and Iron Ages). And while long-distance movements of materials and objects had been one of the hallmarks of modern human behaviour since the Upper Palaeolithic, and continued through the transition to farming despite increasing sedentism, the evidence that such movements involved exchanges, social prestige and profit-tinged trade grows steadily, and such interactions by land and sea accompanied emergent social complexity in many parts of the world. This lecture explores the wider significance of this phenomenon, and various analytical and cultural approaches to explaining the patterning seen.

The World at 2000 BC (CB)
This final lecture of the first half of the course summarises and reflects on the unfolding of global prehistory so far, and offers a broad comparative survey of conditions and developments around the planet by roughly the end of the 3rd millennium BC. It intends to lay the foundations for a debate about the main patterns and processes witnessed to date. There is no additional reading, but a familiarity with the overall chronologies and mapping of such phenomena will be expected.

But if you still have not read the following, please do so over Christmas!

LENT TERM

Lecture 17. 23 January 2018
How do archaeologists investigate and explain archaic states? (EDM)
What are the characteristics of archaic states? How and where did pristine states emerge, and what features did they share in common? What are the implications of the Valley of Oaxaca (Mexico) case, discussed here in detail, for a more general understanding of the dynamics of archaic states?

Reading (find the full references at the end of this document)
*Blanton et al. 1993, see Chapter on Oaxaca (and also Introduction)
Feinman and Marcus, 1998
Coe and Koontz 2008
*Marcus and Flannery 1996
*Marcus and Flannery 2000
Whitecotton 1977
See also readings for Lecture 20.

Background readings for theories about the origins of the state
Carneiro 1970; Childe 1951; Flannery 1972; Fried 1967; Rathje 1971; Service 1962, 1975;
Steward 1955; Wittfogel 1957

Lecture 18. 24 January 2018
Themes in complex societies: why do so many societies create art? (EDM)
Archaeologists (and others) have, in recent years, moved away from thinking about art purely in aesthetic terms, instead asking how ‘art’ has significance in particular social and cultural contexts. This lecture considers the idea that art is participatory as well as visually affecting. That is to say, art creates sites of activity for shared interaction, it creates models for social relations, and it may be used to resist or challenge authority and power relationships. A wide range of examples is given.

Reading (find the full references at the end of this document)
DeMarrais and Robb 2013
Dissanayake 1995
DeMarrais, 2011
Brumfiel, 1996

Lecture 19. 30 January 2018
The origins of complex societies in Mesopotamia and Egypt (AMM)
This lecture will cover the development of early complex society, or interwoven hierarchy and heterarchy, in ancient Egypt and Mesopotamia. Both regions saw the development of social complexity in the 4th millennium BC, a gradual shift from small and flexible groups loosely tied by social connections to massive cities and states driven by politics and religious power. Both Egypt and Mesopotamia shared reliance on river irrigation for agriculture and transport, monumental religious architecture, and early writing.
Suggested Readings:

Lecture 20. 31 January 2018
Early Writing and its Materiality (HP)
When is an ancient text not just a text? Using ancient Egypt as a case study, this lecture will discuss ancient writing through the prism of materiality. The media of ancient Egyptian written sources (papyrus, stone, ceramic sherds, clay tablets) compel us to study them first and foremost as objects, with a distinct archaeological context and a life of their own that are more or less independent of the layer of writing that they bear. Furthermore, even if most modern specialists tend to privilege the written component of such objects, it is important to try to determine whether the ancients attached the same degree of importance to these documents.

Reading (full references at the end of this document; please read these sources in the order given below):

Practical 3: 31 January, 1, 2 February 2018
New materialities & complex societies (SEK/EW)

Lecture 21. 6 February 2018
Bronze Age Near East and the Mediterranean ‘world system’ (CB)
The origins of complex societies in Mesopotamia and Egypt

This lecture will cover the development of early complex society, or interwoven hierarchy and heterarchy, in ancient Egypt and Mesopotamia. Both regions saw the development of social complexity in the 4th millennium BC, a gradual shift from small and flexible groups loosely tied by social connections to massive cities and states driven by politics and religious power. Both Egypt and Mesopotamia shared reliance on river irrigation for agriculture and transport, monumental religious architecture, and early writing.

Suggested Readings:

Lecture 22. 7 February 2018
From Civilizational Collapse to the Emergence of Empires: Indus and later South Asian archaeology (JH)

The Indus Valley Civilization was one of the great Old World civilizations, but in the second millennium BC it seemingly collapsed, with cities and states not appearing in South Asia for another thousand years. At face value this is one of archaeology’s most enduring mysteries. Yet when we look more closely we see a complex story of environmental changes, and social, economic and political transformations. These included: the spread of iron, a reorientation of settlement, expansion of trade, new social hierarchies and the birth of Buddhism. This lecture will examine these interrelationships from the decline of one complex society to the emergence of the first pan-Indian empire in the fourth century BC.

Agrawal 2007

Allchin and Allchin 1995, Chapters 5, 7 & 10
Chakrabarti 1999, Chapter 7
Thapar 2002, Chapters 3 & 4

Lecture 23. 13 February 2018
Archaic states in the Americas (EDM)

This lecture surveys the emergence of the state in three areas: the Maya lowlands, Teotihuacan in Mexico, and Moche on the coast of Peru. The utility of a comparative approach is discussed, with emphasis on understanding the dynamics of power and the nature of political economies in the past in the Americas.

Blanton et al. 1993
Blanton et al. 1996

Lecture 24. 14 February 2018
What was the nature of early complex societies in Africa? (CB)

Outside of the Nile Valley, Sub-Saharan Africa witnessed several foci of early complexity and statehood, many of which challenge Eurasian models and thereby expand our conceptual range. The longest traditions lay in arid west Africa, where they extend back into the second millennium BC. The states of eastern and southern Africa emerged in three broad zones: the Indian Ocean coast, the Zimbabwe plateau plus neighbouring regions, and the Great Lakes. Whereas these states were once considered to result from outside initiative, all three areas demonstrate a range of indigenous political formations. On the coast, African elites controlled materials emerging from the continent, whilst adopting elements of Middle Eastern society, such as Islam. On the Zimbabwe Plateau an indigenous emphasis on the control of cattle overlapped with the manipulation of gold production and trading of gold to the coast. In the Great Lakes where there was almost no penetration by long distance trade, elites exploited a range of resources in establishing and maintaining their power.

Lecture 25. 20 February 2018
What is an empire? (EDM)
How did the first empires differ from archaic states? What were the sources of power, authority, and legitimacy in early empires? How was the political economy organized? This lecture will include an overview of theoretical approaches, including post-colonial theory, and will examine archaeological examples. The meteoric rise to power of the Inkas will be examined through Inka archaeology, emphasising the importance of ideology, ceremonial hospitality, and militarism in the trajectory of this early empire.

Lecture 26. 21 February 2018
How and why did early empires and city-states emerge in western Eurasia? (CB)
During the early to middle of the first millennium BC, in the period known as the Iron Age over much of western Eurasia, a sequence of newly ordered empires with unprecedented capabilities for expansion emerged in and around Mesopotamia. The earliest of these, Assyria, displays traits, such as royal road networks and professional armies, that would become standard in later empires such as those of Babylon and Persia. Meanwhile, in tandem, and intimately connected through trading ties and tribute, the shores of the Mediterranean saw the rise of numerous smaller, urban polities known as city-states, of which the polis societies of Greece are the best attested, with different versions in the Levant (including ancient Israel and Phoenicia), Italy, north Africa and Spain. Trade promoted shared cultural practices fundamental to later ‘Classical’ civilization. As the Mediterranean economy grew, it drew in societies round the Black Sea and in temperate Europe, which altered in the process. These developments laid the foundations for larger imperial units, culminating in Rome.

Lecture 27: 27 February 2018
The archaeology of the Roman empire: imperialism and integration
The Roman Empire extended from Northern Britain to the deserts of Northern Africa, from Spain to Arabia (and beyond), encompassing very different environments and civilizations. Archaeology has contributed a great deal towards illuminating what kept this mosaic of people and cultures together, highlighting a fundamental relationship between imperialism and integration.

Lecture 28: 28 February 2018
How do we understand extreme ideologies? The Aztecs (EDM)
Why did the Aztecs practice sacrifice? Is there a ‘cultural logic’ behind the practice? This lecture examines the role of ideology and religion in early empires, using the Aztecs as a case study. Craft specialization and the roles of merchants in the political economy are also highlighted.

Lecture 29: 6 March 2018
The Early Empires and States of East and Southeast Asia (JH)
For over a millennium, city states and empires developed in East and Southeast Asia that were largely removed from other contexts in the West. They developed unique cultural and linguistic identities of their own. Yet transformations in these regions did not follow the
same trajectory. In East Asia, following a long period of inter-regional interaction and state formation, we see the development of the first Chinese empire in the third century BC. Imperial China then grew to become culturally dominant and Asia’s first superpower. While in Southeast Asia, we see a series of kingdoms and states emerging at the edges of empire in Myanmar, Vietnam, Thailand and Cambodia – all of which exhibit the influence of interactions with neighbouring empires in China and India. This lecture will examine developments in each region, focussing on strategies of imperial power and the impact of cultural interactions on the formulation of new regional cultures throughout the first millennium AD.

Materializing Power

Lecture 31: 13 March 2018
The transformation of Eurasia 4000 BC-500 AD (CB)
By the 3rd millennium BC, a combination of bottom-up regional changes and interconnections, plus the expansion of emergent ‘cores’ in Mesopotamia and Egypt, was starting to effect a broader transformation across substantial parts of Eurasia, from the Atlantic to the Pacific.
Along the Indus river a ‘Harappan’ urban, complex society emerged, and although the full manifestations in China came somewhat later, large-scale changes were afoot there too, while Europe and the Mediterranean were studded with smaller-scale hierarchical societies. The various parts of Eurasia were still only tenuously linked, but the continent as a whole now stood out more than ever against other parts of the world.

Essential

Recommended
Lecture 32. 14 March 2018
What are the effects of climate change on societal collapse? (CB)
This lecture explores what can archaeology teach us about long-term relations between humans and the environment, and particularly how are archaeologists addressing modern climate change. It will look at the relationship between climate change and the transformation of the Maya and the Indus Civilisations.

1492 and its consequences (CB)
The Atlantic was Earth’s last great dividing ocean. The permanent breaching of that divide in AD 1492 marked one of the most dramatic moments in an age of exploration that brought Eurasian navigators, and all that traveled with them, to the farthest reaches of the planet. This lecture takes a summary look at societies around the planet on the eve of this connection, explores the drastic consequences of the Columbian exchange (a highly uneven one for the people concerned on either side of the Atlantic), comparing it to previous long-range contacts within Eurasia, and glances forward into the centuries that followed. Since Columbus, the world has become increasingly tied together into a single, often devastatingly exploitative global system, with European trading, colonial and military interests in the fore during the formative centuries. Despite the enormous mass of textual evidence,
archaeology still has a crucial role to play. Historical sources often present a single-sided view where Europeans appear as agents of knowledge and progress, whereas indigenous people are rapidly extinguished or at best passive recipients. Archaeological research reveals a more diverse, balanced picture, albeit with contrasting worldviews and values.

Archaeologies of historical periods, colonialism, globalisation (EDM)
Why is written evidence seen as different from archaeological evidence and to what extent is this distinction meaningful? How can archaeology contribute to periods for which there is written evidence, including the very recent past? Early texts are often read as simple factual statements, whereas in fact they usually embody messages about ideology, religion and power. All written documents, including those of the present day, should be interpreted within the wider context of contemporary society. Case studies will be drawn from the UK and the United States.

The past in the present (MLSS)
The past (as archaeological heritage) is used in a range of contexts in the present and for a variety of motivations. This lecture introduces you to some of these contexts and discusses
what kind of ‘use’ we can observe and some of their consequences. The aim is to make you contemplate how and why such links are made, and to provide you with some examples to think with. I shall pay particular attention to the connections between issues surrounding memory, identity, contestation and reconciliation, as well as how changing conceptions of ownership and understandings of rights over the past have emerged. I shall also refer to a number of specific case studies including cases recognised as World Heritage (both tangible and intangible), cases of contested heritage, and examples of community archaeology as heritage.
